

A scatter plot showing the relationship between 'Uncertainties' (X-axis) and an unlabeled Y-axis. The X-axis ranges from approximately 0.08 to 0.18, with major ticks at 0.10, 0.12, 0.14, 0.16, and 0.18. The Y-axis ranges from 0.10 to 0.50, with major ticks every 0.05. The plot contains numerous blue circular data points and a solid red regression line. The regression line shows a positive correlation, starting at approximately (0.08, 0.16) and ending at (0.18, 0.37). The data points are widely scattered around this line, with some points showing higher uncertainty than others.
